## Plan Review and Updates

The Trent Lands and Nature Areas Plan is a long term framework plan created through extensive engagement, and is intended to support campus planning moving forward. The Plan will be reviewed for accuracy and general upkeep every **5-years**, integrating new information as it becomes available through detailed studies, reports on monitoring, and ongoing engagement with the campus and community related to various initiatives, or as new regulatory policies or plans are approved.

This review process will ensure the Plan is responsive and adaptable to changing priorities, funding opportunities, infrastructure needs, and Nature Area protection requirements. Through this process, there will be future opportunities to refine the Plan and reduce unanticipated areas of confusion, or include new information and findings that are relevant to the planning processes.

The review should examine the following:

- » Is the Plan consistent with the regulatory and policy frameworks in place at the time of review?
- » What is the University's performance – has it met established targets and key performance indicators?

- » Is consistent monitoring being conducted and should a new approach to monitoring be examined?
- » Are there significant findings from the monitoring that should be considered? The review should analyze evolving data from project commencement to the end of the review period to examine if the project should adapt to shift priorities to problem areas.
- » Is ITK baseline data still current, and/or should an update be commissioned?
- » Are there significant findings from ongoing engagement with diverse groups undertaken as part of the various project initiatives that require integration into the Plan?

Updates to the Plan can capture data / informational changes related to detailed and site-specific studies. Updates that occur outside of the 5-year review may be triggered by extraordinary events (e.g. release of the Provincial Highway Reserve by the Ministry of Transportation) that change the land use management direction recommended in this Plan.

Updates made to the Plan will require review and approval by the Board.
